JORGE LUIS COTERA LÓPEZ

Full-Stack Software Developer — Java | Spring Boot | React | TypeScript | REST & GraphQL APIs

jorgecoteralopez@gmail.com | +(506) 6434-6434 | Costa Rica | Portfolio | GitHub | LinkedIn

PROFESSIONAL PROFILE

Full-Stack Software Developer with 2+ years of experience designing, building, and deploying backend applications in Java and Spring Boot, including REST and GraphQL APIs in production, as well as front-end applications with React, TypeScript, and JavaScript. I have built complete websites for the PokeTeams and Library API projects, documented 100% of endpoints with OpenAPI/Swagger, and automated CI/CD pipelines that reduce deployment time to under five minutes. With genuine curiosity to learn, I constantly explore new tools and approaches: I am currently developing PokeTeams, comparing GraphQL and REST within the same service and implementing OAuth2 both in regular web applications and machine to machine auth, practicing problem-solving on LeetCode, HackerRank and Codeforces, expanding my knowledge of Full-Stack development and cybersecurity. Collaborative, meticulous in debugging and code review, and focused on the agile delivery of quality solutions within established deadlines.

TECHNICAL SKILLS

I consider that concepts are always before implementations and I've used way more technologies and `paradigms` that the ones listed below, but here's my are of expertise:

Java • Spring Boot • REST & GraphQL APIs • React • TypeScript • JavaScript • MySQL & PostgreSQL • MongoDB • JWT Authentication, OAuth2 • Git, GitHub & GitHub Actions (CI/CD) • Unit Testing, Integration Testing, E2E Testing • Code Reviews • Object-Oriented Design, Functional Programming • Data Structures & Algorithms • Agile Methodologies and SCRUM

EXPERIENCE

PokeTeams Service — Full-Stack Developer **Dec 2025 – Present**

- Designed and developed a dual-interface backend that simultaneously exposes GraphQL and REST from two different Spring Boot services, evaluating schema evolution and query performance trade-offs.
- Built a complete website for PokeTeams using React and TypeScript, consuming the GraphQL and REST APIs.
- Modeled a complete GraphQL schema (types, queries, mutations, cursor-based pagination) with resolvers mapped directly to the JPA entity model.
- Applied third normal form (3NF) normalization on PostgreSQL, eliminating redundancy between related entities.
- Currently developing a chat using concurrent technologies such as Spring WebFlux and R2DBC

Billing SaaS (In Development) — Backend Developer **Sep 2025 – Present**

- Designed a relational billing model (customers, products, invoices), implementing cascading updates and logical deletion at the service level.
- Structured services behind interfaces to enable unit testing with mock repositories, decoupling business logic from persistence.
- Applied Factory Method to bill entities scalating the project way more easy.

Library API (Production) — Full-Stack Developer **Jan 2025 – April 2025**

- Designed and implemented a RESTful API using a layered architecture (controller-service-repository), centralizing error handling according to the RFC 7807 standard.
- Built a complete front-end website for the Library API using only basic JavaScript, consuming the RESTful endpoints.
- Documented 100% of endpoints with OpenAPI/Swagger, reducing onboarding time for other developers.
- Automated a CI/CD pipeline with GitHub Actions, reducing production deployment time to under five minutes per integration.
- Integrated AI assistants (Claude Code, GitHub Copilot) into the development workflow using Stop Conditions ad Verifiable Goals to prevent infinite loops, reviewing every generated suggestion before integration to maintain code quality standards.

To-Do API **Oct 2024 – Dec 2024**

- Implemented JWT authentication and a state machine for tasks (PENDING → IN_PROGRESS → DONE), applying idiomatic REST conventions.

Node.js-Spring Boot integration API **Sep 2024 – Oct 2024**

- Developed an integration between a Spring Boot API and a Node.js API

EDUCATION

Computer Science Studies — Universidad Central "Marta Abreu" de Las Villas, Cuba (2024 – 2025, only first year)

CONTINUING EDUCATION

• Master's in Full-Stack Web Development — Conquer Blocks (in progress since Jun 2026)

• Master's in Cybersecurity — Conquer Blocks (in progress since Jun 2026)

• Software Engineer Certificate — HackerRank (January 2026)

• AI-Assisted Software Development — BigSchool (March 2026)

• Cybersecurity and Ethical Hacking — BigSchool (April 2026)

INTERESTS

Genuine interest in computers in general: I actively study networking and subnetting, cybersecurity, algorithms, and data structures. I enjoy building homelabs to experiment with infrastructure and practice network configurations in my own environment, using virtual machines or physical servers with different operating systems and architectures.
